- 3 The Client may request the Successful Applicant to clarify the breakdown of remuneration rates during the Contract negotiations. At the negotiations, the Successful Applicant shall be prepared to disclose its audited financial statements for the last4(four) years to substantiate its breakup of remuneration rates.  - (a) accelerated development;
 - (b) inclusive growth and;
 - (c) gainful employment.

The Amritsar Kolkata Industrial Corridor (AKIC) project is one among the eleven corridors promoted by G o I; AKIC is conceptualized along the high capacity, high-speed Eastern Dedicated Freight Corridor (EDFC) as the backbone and runs parallel to the Golden Quadrilateral and its diagonals, thus enhancing the attractiveness for investments.

- The **Error! Reference source not found.**IMC Khurpia is one of the eight Industrial Nodes under the Amritsar-Kolkata Industrial Corridor (AKIC). An area of 1,002 acre has been demarcated for the development of an Integrated Manufacturing Cluster (IMC) at Khurpia in Udham Singh Nagar District in the state of Uttarakhand.

10) Details of Land use Plan is given in Figure 2.

Figure 2: Land Use Plan

2) Infrastructure and Other Facilities

1.2.1 Transportation

- 1) The Khurpia IMC site lies in close proximity to two national highways (NH-09 and NH-109) and one state highway (SH-44). The main access road to the site is from Kichha Bypass and SH-44 (Bareilly-Nainital Road) which runs parallel towards the eastern side of the site.
- 2) In tandem with the proposed land use segregation a hierarchical circulation network is proposed to enable efficient movement of goods and people. A 60 m Row access road is taken from Kichha Bypass which enables last mile connectivity to the site. The access is taken at the southern half of the site as it is in proximity to the SH-44 and NH-09. A 45m Row Road forms the arterial road of Khurpia IMC and acts as central spine of Khurpia IMC travelling from south to north till the anchor units zone. This arterial road brings in and spreads out the traffic onto sub arterial roads (30 m Row) that branch out into the various zones of the site and vice versa. It is proposed that distributor and feeder road network in the IMC will be of 24 m and 18 m Row s for industrial zone. In residential zone the local access network will be of 24 m and 18 m Rows. A 7 m wide periphery road is proposed along green belt of river beni for peripheral green buffer maintenance.

1.2.2 Water Supply/STP/CETP/Storm water drainage/Solid Waste Management

1.2.2.1 Water Supply and Distribution

- 1) Due to unavailability of surface water source in the region, water needs of IMC Khurpia are proposed to be met through groundwater extracted through tube wells as well as recycled wastewater supplied from the proposed STP and CETP in the IMC. Techniques and technologies are adopted in planning and design aimed towards a recycle-reuse-recharge policy. Strategies are proposed for monitoring the network for leaks and minimizing unaccounted- for-water (UFW). Further methodologies are adopted for metering utilities for various land uses and activities in the designated area. The strategy for supplying water for various usages in IMC Khurpia is to utilize the entire treated wastewater within project area. Moreover, for the proposed product mix of automobile industries, 80-90% of process water requirement can be met through recycled water.
- 2) The total water demand covering residential, industrial, commercial, amenities, fire demand and other uses is 11.78 MLD at ultimate stage in 2038-39. Out of this demand, 6.16 MLD shall be met through recycled water from CETP and STP. For potable water supply, a gross demand of 5.62 MLD shall be met from ground water

through 7 Nos. of tube wells. The entire distribution network of potable and recycled water shall be developed in first phase only except for 2 tube wells and part of pumping machinery which shall be installed in 2nd phase in 2030-31 or as per the demand.

1.2.2.2 Wastewater Management:

- 1) The industrial and domestic wastewater shall be treated in the CETP and STP up to the tertiary level. After tertiary treatment, the recycled water shall be pumped into the recycled water GSRs catering to their respective zones. The distribution and supply of recycled wastewater and the freshwater (from tube wells) is proposed to be through a system of separate pipe networks through two distribution zones for each. The supply is proposed to be done using a system of underground service reservoir and hydro-pneumatic system equipped with a battery of variable speed pumps as against the conventional overhead reservoir-based system of supply.
- 2) The proposed CETP at its ultimate capacity shall be 6.9 MLD with 3.45 MLD modules to be constructed in Phase 1 and 3.45 MLD in Phase 2. The STP at its ultimate capacity shall be 1 MLD with 0.5 MLD modules to be constructed in Phase 1 and 0.5 MLD in Phase 2.

1.2.2.3 Solid Waste Management

- 1) The solid waste generation for plan horizon year in Khurpia site has been calculated as per Solid Waste Management Manual – 2000 & 2016, published by the CPHEEO, Government of India. To achieve nearly a zero waste target, it is recommended to use bio-degradable waste for power/ bio gas generation and to use the residual heat energy in cooking, fuel for vehicle, for heating and cooling in industries.
- 2) The total waste generation in plan horizon year is calculated as 42.59 ton per day. Of which, solid waste generated from residential/commercial areas is about 9.35 tons/day and waste generated from industrial area is about 33.24 tons/day. The physical composition analysis of the mixed municipal solid waste in proposed IMC has been worked out on the basis of following categorization as per CPHEEO manual.
- 3) Recyclable Waste from Residential & Commercial areas: The recyclable waste shall be mainly of paper, plastic bottles, glass bottles, card board, glass, scrap packing cases, plastic container, cans, newspapers etc.
- 4) Recyclable Waste from Industrial use: The recyclable waste from automobile industries shall be mainly from packing cases (wooden and card board waste), metallic scrap etc.

- 5) Bio Degradable Waste: This includes mainly kitchen waste, waste from fruit / vegetable shops, restaurants and the garden waste.
- 6) Non-Biodegradable Waste from Residential & Commercial areas: Remaining Municipal waste is considered under non-biodegradable / inert matter category. Inert material would be mainly the soil from street sweeping, bricks, tiles, stone, soil, rubble, plaster, drywall or gypsum board etc.
- 7) Since Solid waste Management site is proposed within Khurpia IMC area, the solid waste shall be collected and transferred directly to SWM site. No transfer station and no separate secondary collection system are proposed.
- 8) Onus of Hazardous waste handling, storage& disposal shall be borne by individual industrial units(Anchor and Ancillary units). For proper management and disposal of hazardous waste from the industrial area, an authorized (nearest available) Hazardous waste recycler has been identified. As per Site investigation and stakeholder consultation, the nearby available Hazardous waste recycler, who is authorized by CPCB is Bharat Oil & Waste recycler, Global Environmental Solutions.
- 9) Integrated approach to ensure statutory compliance requirements: IMC Khurpia will be provisioned with a comprehensive Integrated Solid Waste Management Plan (ISWM), which will comply with the statutory requirements of the Solid Waste Management Rule 2016, Hazardous and other Wastes (Management And Trans boundary Movement) Rules, 2016, E-Waste (Management) Rules, 2016, Plastic Waste Management Rules, 2016 & Construction And Demolition Waste Management Rules, 2016.
- 10) A multipronged approach with 5Rs principle - Reduce, Reuse, Recycle, Recover and Remove shall be used as a key waste management strategy, in order to reduce the quantity of waste to be handled, the cost associated with its handling, and its environmental impacts.

1.2.3 Power Supply System

- 1) Entire IMC Khurpia area is divided in three zones & power calculations for total power load in IMC Khurpia is done considering latest master plan with 61% Industrial Allocation. The total power demand calculated is 144MVA. It is proposed that PTCUL shall construct 220kV main Receiving Substation (SS) as per Master Plan. PTCUL shall arrange 33kV Incoming power supply within 220/132/33KV Substation boundary. 33kV, XLPE, FRLS, Aluminum earthed armored HT outgoing Cable laid in underground RCC duct on GRP Cable Trays from MRSS to individual 33kV Substation. 33kV Substation to RMU, CSS in Ring Formation to cater load demand of all the earmarked plots for Industrial,

Commercial, Residential, utility & administrative plots located all across KIMC. Incomer 33kV Cable for each SS is designed for 55MVA Load Catering to any two Sub Station Load whereas each 33 kV Substation (ESS) is designed to Cater maximum 30 MVA.

- 2) Projected power demand for entire project at Khurpia is 144 MVA. Basis plot sizes Load on 132kV is 62 MVA, 33kV is 15 MVA & on 11kV is 64 MVA. If any change is required in power demand, based on the type of the industries finally get established in the area, the PMC will help SPV to take required action / suitable modification. The Electrical System is designed according to load distribution & further major electrical equipment's ratings/quantity of 33kV /11Kv Substations, 33kV RMU, 11kV RMU, 11kV CSS have been worked out to cater ultimate area of development. The other Components such as cables, GRP Trays, Underground RCC Ducts, lighting Poles & Feeder Pillars have been estimated for complete area.
- 3) As per UPCL Uttarakhand guidelines; it is proposed that for Anchor unit having connected load more than 10MVA & less than 50 MVA shall be released power on 132kV. 132kV Feeder shall be made available by PTCUL in its proposed 220kV/132kV/33kV Substation in Khurpia. Anchor units owners shall directly liaison with PTCUL to get 132kV Connection. Further Substation & distribution for internal demand shall also be developed by Anchor owner themselves.
- 4) There are total 4 Anchor units plots planned for 132kV connection. It is proposed that for Anchor units having connected load more than 3 MVA & less than 10MVA shall be released on 33kV. 33kV Feeder shall be made available from proposed 33kV Substation. 33kV 3 WAY RMU shall be provided near Anchor Plots. Maximum Loading on each 33kV RMU shall be 10 MVA.
- 5) There are total 3 Anchor Plots which need 33kV Connection & are allocated one per each Substation. Further internal distribution shall be taken care by Anchor plot owners. Similarly for Plots having demand up to 3 MVA, 11 kV Ring Main Unit shall be provided near to plots. For Space optimization & reduced voltage drops, all 11 kV RMU's will be fed from nearest electrical substations or it's consecutive RMU connected in Ring. Maximum loading on 11kV RMU under worst scenario shall not be more than 5 MVA.
- 6) As per Zone wise power distribution & considering 12.5 MVA Power Transformer Rating following UPCL & SIIDCUL other Industrial Cluster design, it is proposed three number 33/11 KV electrical sub stations to cater both 33kV & 11kV & below power demand. 2 numbers SS proposed in zone-2 and 1 number SS in zone-3. Boundary of power distribution scope is up to field installed 33 Kv /11 KV RMU's & 11kV /415V CSS. Further power Connection, cable laying & distribution shall be in plot owner scope. 2 No's 33kV Incoming Feeder, 1 no. bus coupler & 5 nos. outgoing feeders are proposed in 33kV GIS Panel in each of the Substation. All three 33/11 kV substations are designed with identical configuration with five number 11kV RMU

Rings. Quantification & No. of ways of RMU, Feeders in Substations are worked out basis number of plots planned. However approved contractor needs to do detailed design for Khurpia IMC & arrive to final quantity & ratings. SMART Street Lighting System (Hybrid) is proposed for all type of road cross sections with required number of light poles, LED Lighting Fixtures, High Mast, Lighting Panels, Solar Panels, Feeder Pillars, and cabling etc.

- 7) The Entire Lighting System is designed considering Lo Ra based wireless and ultra-low-power consumption control system to control street lamps & will have SCADA Compatible for remote monitoring & Control of Individual Street Light with accurate Lamp failure detection System. Two main power Utilities shall be involved in Uttarakhand for Khurpia IMC–
 - PTCUL (Power Transmission Corporation Uttarakhand Limited) – TRANSCO; which takes care of 132KV & above Transmission & power substation
 - UPCL, Uttarakhand (Uttarakhand Power Corporation Limited) –DISCOM; which takes care of 33KV & below substation & Distribution
 - The design of complete power system shall be based on the Indian standards and the standards issued by International Electro technical Commission.

3) Are a Landscape

- 1) The proposed Khurpia Node will be a major Greenfield industrial development and will offer high end infrastructure development to attract global investment. A well-conceived landscape treatment is a fundamental component of quality infrastructure design and thus landscape design will play a vital role to bind all the different land uses and activities: to integrate the entire development through various visual experiences.
- 2) The Design has been oriented to create an identity to the Location with its unique existing natural landscape of topography, geology, hydrology, and vegetation.
 - Preservation of the natural landscape and further addition to conserve the eco sensitive zone and make a valuable ecological asset.
 - Safe Design interventions to cater to the moods & usage of people working in the industrial workplace.
 - Design Approach that encourages passive activity & Promote Nature as a basis for development of open space for addition to larger prospect of creating environmental conscious design.
 - Designed to provide community building & promote Local Culture.

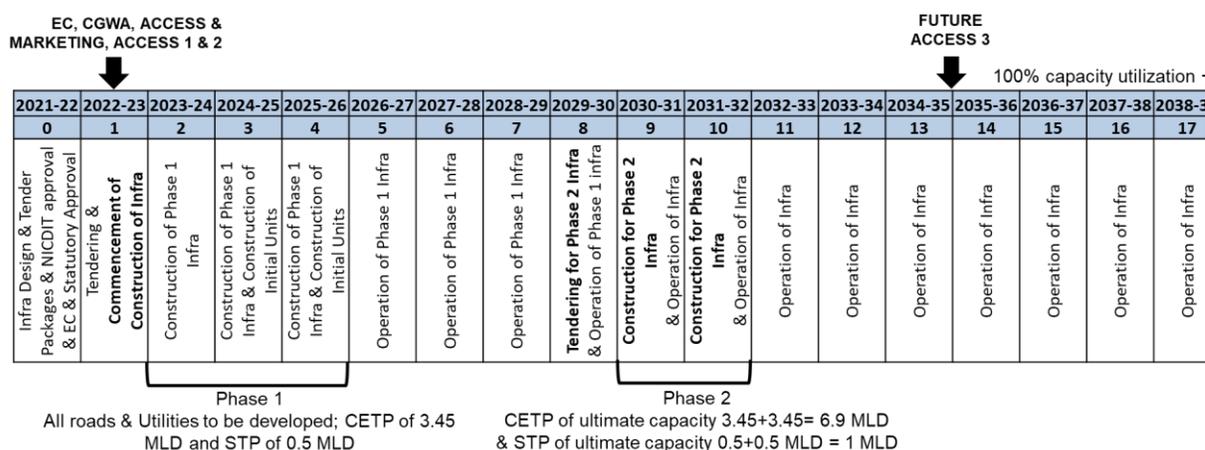

- Following design aspects have been taken into consideration keeping in mind the sensitive natural landscape of the site:
 - Ecological conservation of natural areas: river Beni and Paha canal
 - Passive recreational zones: HT line buffer and water recharge parks
 - Aesthetics and active recreational zones: green play parks
 - Low Maintenance
 - Roads with trees planting
 - Buffer zones: Wide green buffers at site boundary and existing settlements
- 3) Enhancing overall attractiveness by creating open spaces with vegetation, rest area pavilions, nature walks, illumination using solar LEDs, indigenous species of flowering trees and shrubs, enhancing natural existing water bodies with aquaculture (wherever possible) and, accessibility with set of mandatory requirements on green facilities including:
- 4) The number and the forms of seats, green planting (species, location, post-irrigation, etc.), lighting and trash containers, ground covering, signs (indicating the number of facilities within the site, the owner and maintenance units, opening hours), bicycle parking, disabled facilities, etc.
- 5) The large area of natural greens to be developed on a low-cost principle of execution and further maintenance.

4) Project Phasing

- 1) The first work of PMC will be to check the EPC tenders prepared by Master planning consultants for tendering, do necessary modifications and help SPV to float the tender.
- 2) Considering the project size and the market absorption potential of Khurpia IMC, it is estimated that the entire saleable industrial land of the IMC shall be absorbed by the market in Phase 1 itself and hence the entire IMC along with associated infrastructures is proposed to be developed in Phase 1 (2023-24 to 2025-26) itself. However, the utilities like CETP, STP shall be developed in modular format based on the phase-wise infrastructure demand projections. It is estimated that the project shall reach its ultimate capacity in Phase 2 (2031-32 to 2038-39), i.e. all industrial units in Khurpia IMC shall reach 100% capacity utilization. The phasing details are as follows:

- Phase 1 Construction (2023-24 to 2025-26): All infrastructure components and Phase 1 of CETP (3.45 MLD) and STP (0.5 MLD).
- Phase 2 Construction (2030-31 to 2031-32): For creating additional modules of CETP (3.45 MLD to reach total capacity of 6.9 MLD) and STP (0.5 MLD to reach total capacity of 1 MLD).
- The phasing of construction activities is depicted in Figure 3.

Figure 3: Construction Phasing Strategy

1.4.1 Works to be done in Phase A

- 1) The PMC has to ensure that the development proposed in the Master Plan already prepared by NICDC Uttarakhand Industrial Township Limited, is not only cost effective but also environment friendly vis-à-vis the normal mode of development / construction currently in use in Uttarakhand and in India. For the same, it is advisable to work on a 3 D technology model for all the infrastructure development and the model should be able to simulate the situation in case of some natural calamity. The modeling should also be used to show case the cost effectiveness of the technology used and the benefits which can be accrued by the various stake holders involved with the project. An indicative list of activities to be under taken for ensuring sustainable development is given below:

Tender Package	Components of Work	Works	Mode of Implementation
Package 1	Component A	Roads, Civil work including Admin Building, Wet Utilities (Water Supply, Drainage, Wastewater Conveyance), Power and Landscaping, Solid Waste Management System, CETP & STP	EPC Contractor
	Component B	Information & Communications Technology	EPC Contractor for ICT
Package 2	Component C	a) Power Infra. 220/33/11 kV Substation b) Lilo for 220/132/33 kV Substation	By PTCUL / UPCL (Deposit Work)
Package 3	Component D	Flood Protection Works	Uttarakhand Irrigation Department (Deposit Work)

5) Use of waste and manufacturing/process by-product in construction

The sustainable master system integration plan (as provided in detailed scope of work) should ensure that the material used for the construction of roads, building etc. is sourced locally as much as possible. Also, the material which is to be used is waste by-product of some other industry to the extent possible.

6) Use renewable energy (solar, wind, geo-thermal etc.):

The sustainable master system integration plan should lay emphasis on the use of renewable source so far as energy to the extent possible. The Master Plan/Development Plan prepared by NICDC Uttarakhand Industrial Township Limited provides the guidelines with respect to the usage of renewable energy sources and about how the efficiency in energy utilization (at all levels) can be ensured. The PMC has to further dwell upon the same and prepare the implementation plan for maximum utilization of renewable energy at Khurpia Industrial Area (KIA) and provide the steps to continuously improve the efficient energy utilization in the built environment e.g. buildings, transportation mode etc.

7) Use technology that require less water during the construction of infrastructure

Water is a scarce resource and the sustainable master system integration plan should emphasize on the usage of technology which uses less water during all the stage of city life, be it construction, operation, maintenance, re-generation etc.

8) Recycle and reuse of water and waste

The sustainable master system integration plan list all re-use able material available within the state of Uttarakhand which can be used for various construction activities like roads, public buildings, parks etc. and provide policy framework which can be enforced by the development authority. For subsequent phases of development as well, the guidelines should be provided in the sustainable master system integration plan along with the list of material along with uses.

9) 3D Model Driven Approach for AKIC Nodes

AKIC mandates the use of advanced computer based dynamic 3D-model driven approach for the detailed planning, design, engineering, construction, and operation of the AKIC nodes to allow simulation, visualization and engineering analysis of all transportation, utility, building, civil works and geo spatial infrastructures. This includes an aggregate dynamic 3D information model for the city infrastructure systems with 3D building models, 3D civil infrastructures, 3D models for rail, roads and underground and above ground utilities system participating. 3D infrastructure modeling tools shall be used to develop and produce project models and simulations (e.g. in case of natural calamity etc.) as required for submittals. The 3D Infrastructure Information Models are to be used throughout the design, construction and operational life-cycle of the asset, including but not limited to, for system collision detections, materials quantification, construction sequencing, and carbon impact analysis. 3D infrastructure models shall be maximized for project reviews, decision support, design analysis, and quality assurance during all phases of this Project.
